Pneumothorax and bullae in Marfan syndrome

Background: Increased risk of spontaneous pneumothorax has been described in patients with Marfan syndrome and has been attributed, in part, to the presence of apical blebs and bullae.

Objectives: We assess the risk of pneumothorax and its relationship to the presence of apical blebs and bullae in patients with Marfan syndrome in the era of CT imaging.

Pneumothorax And Bullae In Marfan Syndrome

In the Marfan lung, pneumothorax can be recurrent, present in both lungs, and associated with emphysema. A person with pneumothorax may experience shortness of breath, dry cough, an acute onset of pleuritic chest pain (chest pain that gets worse when you take a deep breath), or chest pain that gets worse when coughing. Restrictive Lung Disease

Pneumothorax and bullae in Marfan syndrome. - Abstract ...

The increased risk of pneumothorax has been attributed to the presence of apical blebs, bullae, abnormal connective tissue constituents in the lung parenchyma or increased mechanical stresses in the lung apices due to the tall body habitus.² The causal gene for Marfan ' s syndrome, FBN1,

Pneumothorax And Bullae

5%–11% of patients with Marfan syndrome develop spontaneous pneumothorax caused by rib cage abnormalities or apical bullae due to fibrillin abnormalities that cause weakening of the connective tissue in the lungs.^{2 3} In addition, Saita et al⁴ observed that patients with PSP have asymmetric and flat thoraces—a clinical feature also present in most patients with Marfan syndrome (pectus excavatum), which predisposes them to the formation of subpleural bullae.

Primary spontaneous pneumothorax in conjunction with

...

A pneumothorax is an abnormal collection of air in the pleural space between the lung and the

Download Free Pneumothorax And Bullae

chest wall. Symptoms typically include sudden onset of sharp, one-sided chest pain and shortness of breath. In a minority of cases, a one-way valve is formed by an area of damaged tissue, and the amount of air in the space between chest wall and lungs increases; this is called a tension pneumothorax.
