In SOA, a service is a self-contained unit of software designed to complete a specific task. Service-oriented architecture allows various services to communicate using a loose coupling system to either pass data or coordinate an activity. Loose coupling refers to a client of a service remaining independent of the service it requires. In addition, the client -- which can also be a service -- can communicate with other services, even when they are not related.

What is SOA? Understanding the Service-Oriented Architecture Guide

Service-oriented architectures that use Web Services will result in a blurring between internal and external services. Architectures will be constructed using a combination of those internal and external services. As time goes, these services will become more standardized making it easier to replace one “ plug compatible ” service with another.

Web Services, Service-Oriented Architectures, and Cloud ...

Web services are leading to the use of more packaged software either as an internal service or an external service available over the Internet.

These services, which will be connected together to create the information technology systems of the future, will require less custom software in our organizations and more creativity in the connections between the services.

Web Services, Service-Oriented Architectures, and Cloud ...

This is a guide for the savvy manager who wants to capitalize on the wave of change that is occurring with Web Services, service-oriented architecture, and—more recently—Cloud Computing. The changes wrought by these technologies will require both a basic grasp of the technologies and an effective way to deal with how these changes will affect the people who build and use the systems in our organizations.

SOAP - Web Services, Service-Oriented Architectures, and ...

Web service Characteristics. Web services have the following special behavioral characteristics: They are XML-Based - Web Services uses XML to represent the data at the representation and data transportation layers. Using XML eliminates any networking, operating system, or platform sort of dependency since XML is the common language understood by all.

What are Web Services? Architecture, Types, Example

Service-oriented architecture is a style of software design where services are provided to the other components by application components, through a communication protocol over a network. A SOA service is a discrete unit of functionality that can be accessed remotely and acted upon and updated independently, such as retrieving a credit card statement online. SOA is also intended to be independent of vendors, products and technologies. A service has four properties according to one of many defini
